

## Environmental Policy to BS ISO 14001

As a responsible employer and member of the business community, Broady Flow Control Limited is committed to minimising the environmental impact of its operations by monitoring and controlling outputs in line with current legislation and best practice.

The high environmental standards required are established by the General Manager / Director and communicated to all staff through training. The day to day monitoring of the effectiveness of this policy has been delegated to the Health and Safety Officer but this does not absolve individuals from their responsibilities, in particular, Department Heads remain responsible for activities within their department.

The Health and Safety Officer maintains a Register of Substances with Product Data Sheets which provide details of safe use, storage and disposal. These are available to all personnel as required and any protective equipment is provided to ensure the safety of both staff and the environment.

Potential risks identified by any individual must be notified through line management systems to the Health and Safety Officer or in his absence to the General Manager / Director. Any such risk will be assessed and appropriate actions taken to mitigate the risk.

All employees must co-operate with legitimate instructions relating to environmental controls and failure to adhere to applicable procedures or instructions will be considered misconduct and disciplinary action taken accordingly.

Signed   
A R Robinson (General Manager / Director)
